

Hanna Calibration Solutions, Buffers & Standards

Hanna's **buffer solutions** are made from established formulas and are standardized with a pH meter that is calibrated to the NIST primary standard buffer solutions. The 20 mL sachets offer the convenience of a premeasured, ready-to-use calibration solution while eliminating any possibility of cross contamination. The pH 4, 7, and 10 buffers also carry lot #, expiration date, and pH/°C chart on every bottle.

Hanna pH buffers are made of Potassium Di-Hydrogen Phosphate and Di-Sodium Hydrogen Phosphate and are standardized with a pH meter that is calibrated to NIST primary standard buffer solutions (NIST 186Ie & 186IIe and NIST 185g S.R.M.).

Hanna also manufactures preformulated Conductivity and TDS solutions for lab and field calibration in 20 mL sachets, as well as 500 mL, one liter, and one gallon size bottles. Each solution is prepared using high-grade Potassium Chloride standardized with a meter pre-calibrated with NIST 999 KCl and conforming to NIST 2201 Silver Nitrate solution.

Our solutions are also available in FDA-approved, opaque bottles which stop light from interfering with the solutions' carefully balanced value.
